Juliana Oyola-Pabon

San Bruno, CA | 352-789-1598 | **julianaaoyola@gmail.com** | **LinkedIn** | **GitHub**

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++
Backend: Spring Boot, REST APIs, Distributed Systems, Event-Driven Architecture, ETL Pipelines
Cloud: AWS (Lambda, S3, DynamoDB, RDS, API Gateway, CloudWatch, IAM, CDK)
Databases: DynamoDB, PostgreSQL, MySQL, Amazon Keyspaces, Amazon DocumentDB, MemoryDB
Tools: Docker, Git, Linux, CI/CD

PROFESSIONAL EXPERIENCE

Amazon Seattle, WA
Software Engineer – Prime Video *May 2024 – September 2025*

- Built core Java backend services for Prime Video's unified content metadata platform, replacing fragmented legacy catalog systems with a centralized metadata service managing millions of content records for internal publishing and content operations.
- Designed and implemented distributed Java services that ingested, validated, normalized, and modeled complex metadata relationships across movies, television series, actors, artwork, trailers, release information, and partner-supplied assets powering downstream publishing workflows.
- Developed production AWS infrastructure using CDK, Lambda, API Gateway, DynamoDB, S3, IAM, and CloudWatch to support distributed metadata ingestion, backend APIs, production monitoring, and scalable processing pipelines.
- Engineered resilient ingestion workflows for malformed and large partner-submitted metadata files, overcoming AWS Lambda execution constraints while preserving referential integrity across distributed processing pipelines.
- Authored technical design documents, participated in architecture and code reviews, mentored a newly hired software engineer, and supported production deployments, monitoring, debugging, and production operations.

Amazon Seattle, WA
Software Engineer Intern – Prime Video *May 2023 – August 2023*

- Designed and implemented an automated metadata ingestion service that validated, transformed, and standardized partner-submitted metadata before entering Prime Video's publishing pipeline.
- Built Java backend services and AWS infrastructure using CDK, Lambda, DynamoDB, S3, CloudWatch, and IAM to automate metadata validation, schema correction, and ingestion workflows.
- Reduced manual metadata preprocessing by approximately six hours per malformed submission through automated validation, schema correction, and ingestion workflows supporting files of varying sizes and formats.
- Independently authored the technical design and delivered the project from architecture through testing and production deployment in collaboration with senior engineers.

Amazon Seattle, WA
Software Development Engineer Intern – Amazon Care *May 2022 – August 2022*

- Developed Java backend services supporting appointment scheduling, prescription delivery, patient notifications, and healthcare operations for Amazon Care.
- Designed and implemented a geographic routing algorithm that optimized appointment and delivery assignment based on proximity, replacing FIFO scheduling to improve operational efficiency.
- Analyzed behavioral data from more than 25,000 monthly active users, contributing to product improvements that doubled user engagement while reducing customer drop-off by 30%.

Green Bank Observatory Green Bank, WV
Web Developer Intern *January 2020 – May 2021*

- Developed backend applications and REST APIs supporting the Skynet Robotic Telescope Network, processing more than 10,000 astronomical observations daily.
- Consolidated and optimized millions of astronomical records, reducing storage requirements by 20% while improving long-term data accessibility.
- Engineered REST APIs and automated backend workflows supporting more than 100,000 monthly user interactions, improving storage and retrieval performance by 30%.

EDUCATION

Florida State University May 2024
B.S. Computer Science

Santa Fe College August 2020
A.A. Psychology, Honors
