SKILLS

Diagnostics & Systems: Log Parsing, Failure Analysis (RCA), Telemetry Data Analysis, Root-Cause Investigation, System Observability

Languages & Scripting: Python, Java, SQL, JavaScript, TypeScript, C++, Bash

Data & Telemetry: REST APIs, Distributed Systems, Data Pipelines, High-Throughput Ingestion

Cloud & Infrastructure: AWS (CloudWatch, Lambda, DynamoDB, S3, API Gateway, CDK), Docker, Linux, Git, CI/CD

PROFESSIONAL EXPERIENCE

Amazon

Seattle, WA

Software Engineer – Prime Video

May 2024 – September 2025

- Led technical triage and root-cause analysis (RCA) for complex production failures across distributed services by analyzing system logs, tracing request lifecycles, and resolving reliability bottlenecks.
- Designed and operated production AWS infrastructure using CloudWatch, Lambda, API Gateway, DynamoDB, S3, and IAM, implementing system metrics and monitoring to maintain operational health.
- Engineered fault-tolerant ingestion pipelines handling complex, malformed data payloads, overcoming execution limits while preserving data integrity across distributed operational workflows.
- Developed distributed Java backend microservices for centralized data management, replacing legacy systems to process millions of records powering core downstream infrastructure.
- Authored technical diagnostic docs and design specs, mentored junior engineers, and supported production operations, debugging, and shift handoffs.

Amazon

Seattle, WA

Software Engineer Intern – Prime Video

May 2023 – August 2023

- Built an automated validation and transformation service that eliminated approximately six hours of manual operational debugging per malformed submission.
- Implemented log monitoring and automated schema correction pipelines using AWS Lambda, DynamoDB, S3, CloudWatch, and CDK.
- Owned project execution from technical diagnostic design through implementation, testing, deployment, and production rollout.

Amazon

Seattle, WA

Software Development Engineer Intern – Amazon Care

May 2022 – August 2022

- Designed and deployed a proximity-based geographic routing algorithm replacing FIFO scheduling, optimizing real-world physical appointment and delivery logistics.
- Analyzed behavioral telemetry and system usage data across 25,000+ monthly active users, driving operational fixes that doubled user engagement and reduced drop-offs by 30%.

Green Bank Observatory

Green Bank, WV

Web Developer Intern

January 2020 – May 2021

- Engineered backend services, REST APIs, and automated data workflows supporting the Skynet Robotic Telescope Network, processing telemetry for 10,000+ daily live robotic observations.
- Consolidated and optimized millions of astronomical observational records, reducing data storage requirements by 20% while improving query retrieval performance by 30%.
- Provided continuous backend automation and diagnostic support for network workflows serving over 100,000 monthly user interactions.

EDUCATION

Florida State University

May 2024

B.S. Computer Science

Santa Fe College

August 2020

A.A. Psychology, Honors
