SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++

Frontend: React, HTML, CSS

Backend: Spring Boot, REST APIs, API Design, Distributed Systems

Cloud: AWS (Lambda, API Gateway, S3, DynamoDB, CDK, CloudWatch, IAM)

Developer Tools: Docker, Git, Linux, CI/CD

PROFESSIONAL EXPERIENCE

Amazon

Seattle, WA

Software Engineer – Prime Video

May 2024 – September 2025

- Developed core Java backend services for Prime Video's unified metadata platform, replacing fragmented legacy catalog systems with a centralized platform managing millions of content records for internal publishing and content operations.
- Designed and implemented distributed Java services to ingest, validate, normalize, and model metadata across movies, television series, actors, artwork, trailers, release information, and partner-supplied assets powering internal publishing workflows.
- Collaborated closely with product managers, engineers, and internal content operators to deliver production features, improve publishing workflows, and simplify metadata management across multiple internal teams.
- Built and maintained production AWS infrastructure using Lambda, API Gateway, DynamoDB, S3, CloudWatch, IAM, and CDK supporting backend APIs, distributed processing, monitoring, and deployment automation.
- Authored technical design documents, participated in architecture and code reviews, mentored a newly hired software engineer, and contributed to production deployments and operational excellence.

Amazon

Seattle, WA

Software Engineer Intern – Prime Video

May 2023 – August 2023

- Designed and built an automated metadata ingestion service that streamlined Prime Video's internal content publishing workflow.
- Developed Java backend services and AWS infrastructure to validate, transform, and standardize partner-submitted metadata before publication.
- Eliminated approximately six hours of manual preprocessing for malformed submissions through automated validation and correction.
- Independently designed, implemented, tested, and deployed the project while collaborating closely with senior engineers.

Amazon

Seattle, WA

Software Development Engineer Intern – Amazon Care

May 2022 – August 2022

- Developed Java backend services supporting appointment scheduling, prescription delivery, and patient notifications.
- Designed a proximity-based routing algorithm that replaced FIFO scheduling, improving appointment and delivery assignment efficiency.
- Analyzed behavioral data from 25,000+ monthly active users, contributing to product improvements that doubled engagement while reducing customer drop-off by 30%.

Green Bank Observatory

Green Bank, WV

Web Developer Intern

January 2020 – May 2021

- Developed backend applications and REST APIs supporting the Skynet Robotic Telescope Network, processing more than 10,000 live telescope observations daily.
- Optimized millions of astronomical records, reducing storage requirements by 20% while improving long-term accessibility for researchers.
- Built API-driven automation supporting more than 100,000 monthly user interactions while improving backend storage and retrieval performance by 30%.

EDUCATION

Florida State University

May 2024

B.S. Computer Science

Santa Fe College

August 2020

A.A. Psychology, Honors
